

By relying on our experienced technical experts, advance fully equipped R&D lab and continuous researches we have succeeded to formulate many special paints and coatings according to our customers specific requirements and demands. Thanks to a high speed private software that calculates and analyzes the results of researches, stores and recovers technical data very fast, we are able to evaluate technical / economical information in a glance .

Here again, implementation of ISO/TS 29001 has been very helpful and based on it's postulations, customer's specifications and requirements are collected and reviewed very precisely which could lead to a more reasonable research schedule. All stages of designing & development must be fully documented and traceable .

Up to now, Parsifam research and development center has been successful to design many diverse and sophisticated paints for various customers .

We hereby invite the parties who need uncommon paints for special purposes to introduce their requirements to Parsifam, these requests are processed and researched and after final verification a technical and economical solution is offered to them .

After validation of new product by customer, it would be nominated as Parsifam product .

Due to increasing demands for new high performance and environmental friendly coatings, our current R&D projects are focused on:

- * Solvent free Protective Coating
- * High Solid Protective Coating
- * Single Coat Multi – Layer Coatings.
- * Water Born Paints
